

FET596: ENTREPRENEURSHIP PROJECT
**Team building & leadership,
Challenges & failure**

Dr Serge Nouadjep

2022/2023

One of the most important things in scaling is the team. The team includes you as the founder, your team, and the culture you build. It will entail relinquishing some element of control.

This can be difficult, but you can't properly scale the company without handing over some power.

Building and scaling a high-performing team is hard, and critically important to any fast-growing business.

There is a plethora of articles and books about this topic, so there is a lot to learn.

You can't do business without a community.

It's absolutely essential to build a community or integrate into a community that already has the values you're looking for.

Elong Musk only owns 18% of Tesla, for example.

5% of \$1 billion is much more important than 100% of \$10 million.

In Africa, and especially in Cameroon, everyone wants to be seen, and we're afraid of opening the project up to others under the pretense that someone will steal their project, but that's a mediocre thought.

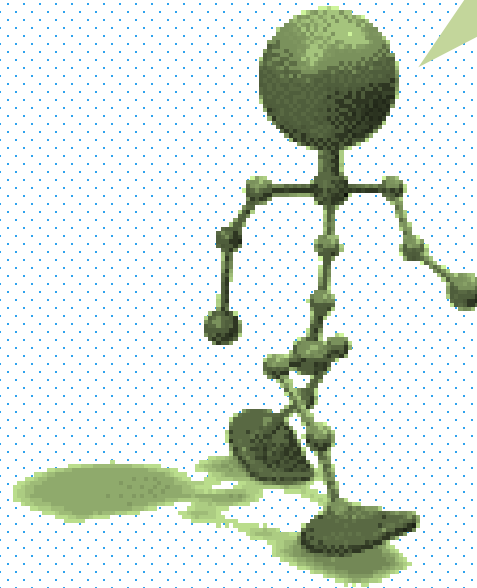

So to prevent stealing, we need to protect it (as in the case of patents)...

The Organisation Africaine de la Propriété Intellectuelle or **OAPI** is an intellectual property organization, headquartered in Yaoundé, Cameroon.

FAILURE

Bouncebackability
The ability for an
entrepreneur to fall an
rise again

It is more risky
not to take a risk

FET596: ENTREPRENEURSHIP PROJECT
**Price vs. Value: Entrepreneurship is more
than innovation**

Dr Serge Nouadjep

2022/2023

An inventor develops something original or makes a major enhancement to an existing idea, typically in a research environment.

An innovator, on the other hand, takes that creation and introduces it to the marketplace, refining it for practical applications and delivering value to users.

Essentially, invention represents the first breakthrough, whereas innovation involves transforming that breakthrough into a tangible product or solution for everyday use.

Price vs. Value: Entrepreneurship is more than innovation

We have successfully instilled in young people the idea that entrepreneurship is synonymous with innovation.

However, this perception has led to a misunderstanding of the true essence of entrepreneurship. Young people forget that **entrepreneurship is, above all, the pursuit of profit**, which consists of bringing a product to market, selling it, and making money.

An Economic Paradox

It is paradoxical to note that more and more young people prefer to create innovative but unprofitable products rather than embarking on more traditional but more lucrative activities.

For example, they prefer to make water flour to generate a turnover of only 2,000 francs per year, rather than growing potatoes to generate a turnover of 100 million francs per year.

**Introduction to TRIZ –Theory of Inventive
Problem Solving**

Dr Serge Nouadjep

2022/2023

People usually face two kinds of problems:

- ❑ Those with generally known solutions
- ❑ Those with unknown solutions
 - Those with known solution can usually be solved by information found in books, technical journal, or other subject matter
 - The other type of problem is one with no known solution. It is called an **inventive problem**.

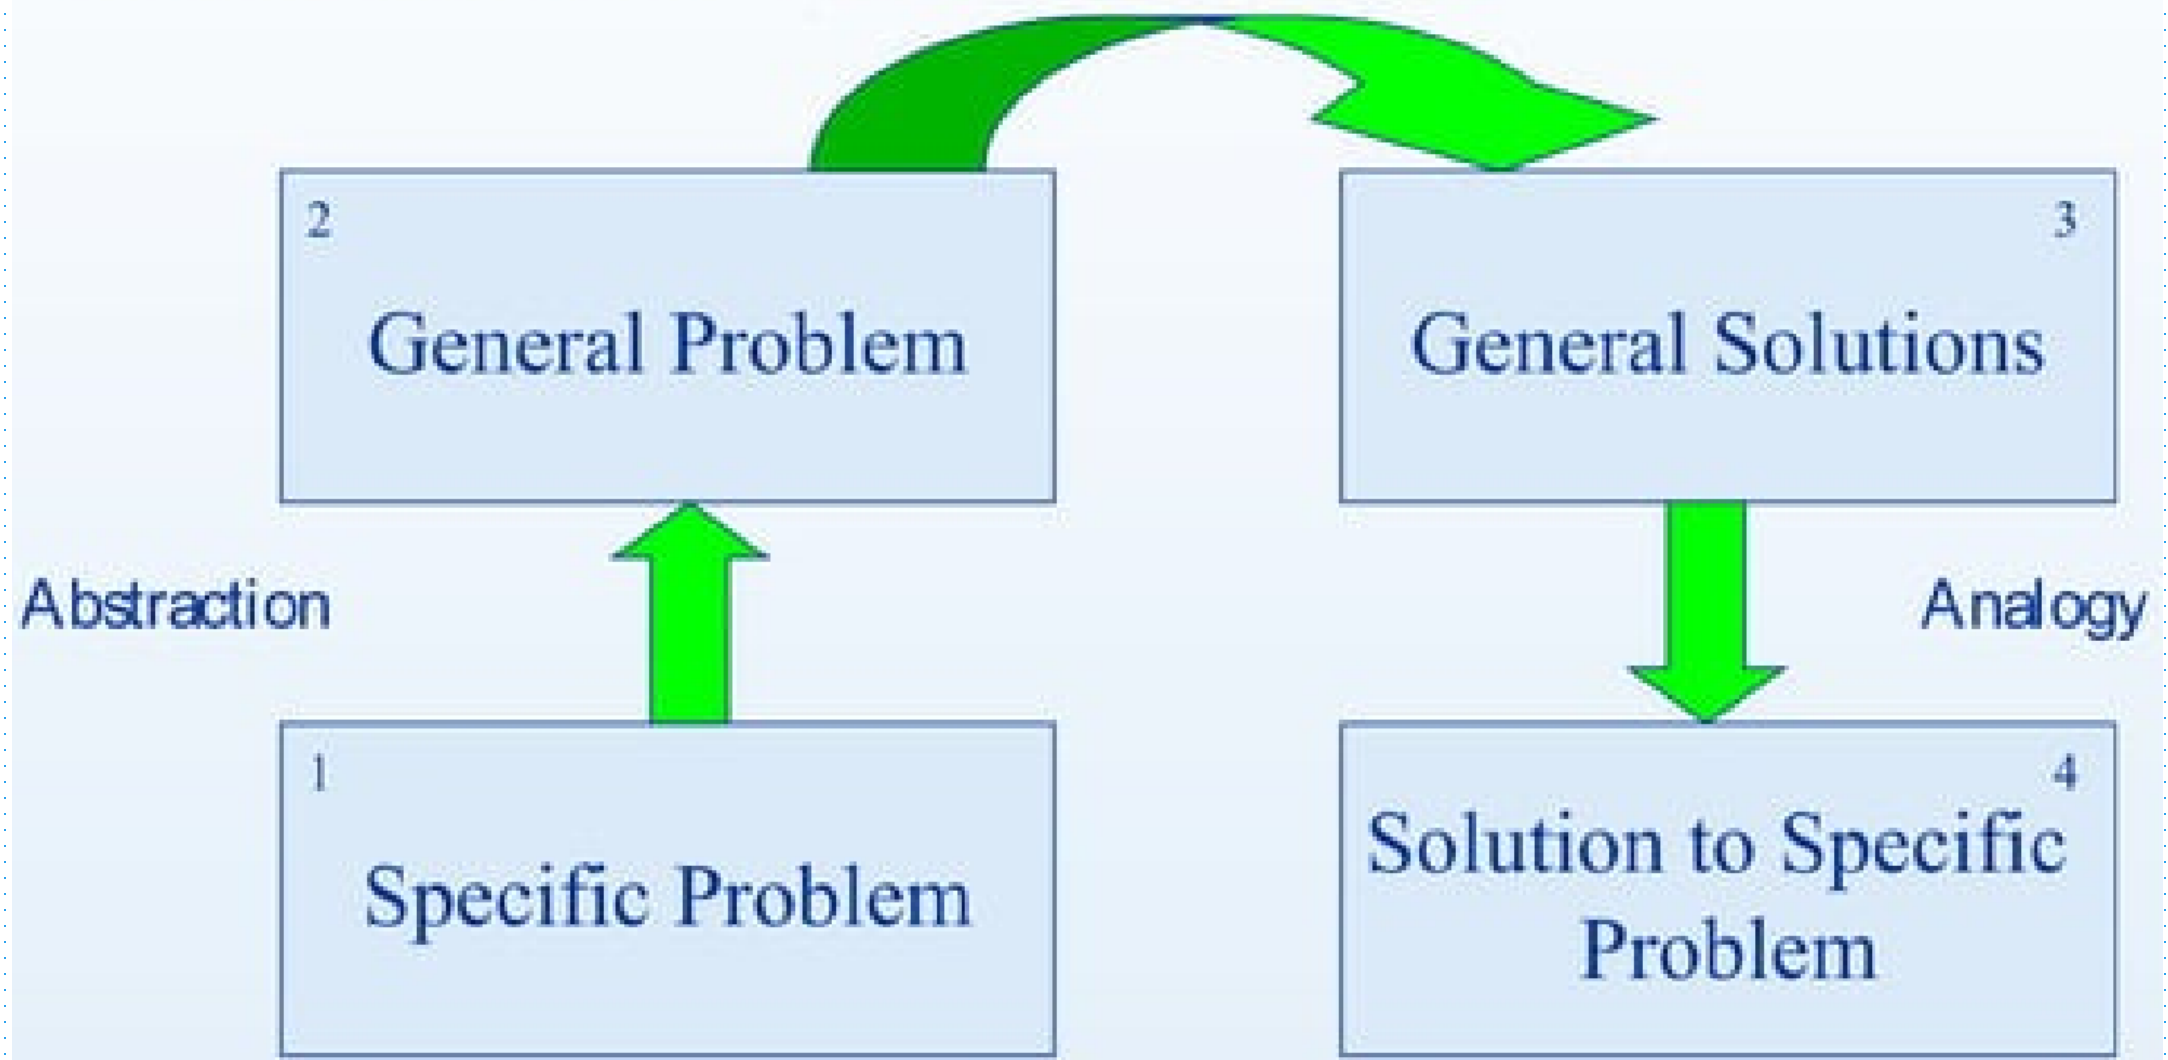

Universal principles of creativity form the basis of innovation.

TRIZ identifies and codifies these principles, and uses them to make the creative process more predictable.

In other words, whatever problem you're facing, somebody, somewhere, has already solved it (or one very like it). Creative problem solving involves finding that solution and adapting it to your problem.

TRIZ is most useful in roles such as product development, design engineering, and process management. For example, Six Sigma quality improvement processes often make use of TRIZ.

The TRIZ Problem-Solving Method

FET596: ENTREPRENEURSHIP PROJECT
Reverse Engineering

Dr Serge Nouadjep

2022/2023

Activities

Implementation of TRIZ Concepts

02/06/2025

New Product development concepts

09/06/2025

Implementation of Reverse engineering
& Critical thinking

16/06/2025

Deliverable: (1) complete report in MSWord and PDF
(2) PPT presentation

These files should be in a **zipped folder named with the group number**

Due: 15/06/2025 at noon
